

The powerTrip controller detects power signals from AC 110v outlets and sends a graceful shut down or power-up command to the digital projector. Simply connect one of the two included power supplies to the outlet you wish to monitor/detect and the other to a continuous power source and the communication cable to the RS232 serial port of the projector. The powerTrip controller provides a simple and convenient connection into existing theater automation systems.

**New For 2005!**

*Field Programmable  
Quicker Response  
Surge Filtration*

- *Connects to existing theater systems*
- *Easy, convenient installation*
- *Cost effective solution*
- *Works with any RS232 enabled projector*
